

## ADAPTIVE RELEASE

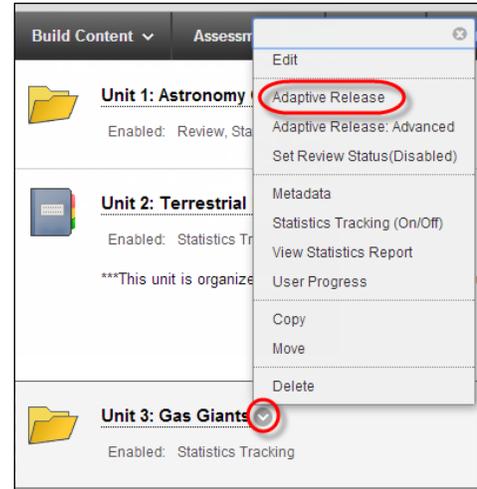

The Adaptive Release tool allows you to customize the release of content, creating a course that is more interactive and tailored to the needs of individual students. With Adaptive Release, you can control when and to whom course content is available.

Criteria	Item released only	For example
<b>Date</b>	On, until, or between specific dates and times	Content is covered in a specific order, and you want content available only after it has been discussed in class.  You have created the Midterm Exam for your class, but you want to release it only during the date and time specified by your institution.
<b>Membership</b>	To specific users or groups of users	You divided your class into four groups and created different assignments for each group.  Specific students have requested more information on a topic.
<b>Grade</b>	If a graded item was attempted or received a certain score, for example, less than, greater than, equal to, or between	You have created multiple review packages. One set for students who received 70% or over on the Midterm Exam, and another set for students who received 69% or under on the Midterm Exam.
<b>Review Status</b>	If a content item is marked as reviewed	You want content to be released only after students have reviewed a related content item.

With **Basic Adaptive Release**, you can apply one rule to a content item. This rule can contain all four types of criteria, but not multiple instances of the same type. All criteria in the rule must be satisfied before the item is released. The more criteria added to a rule, the more restrictions on the release of that item, making it more difficult for users to gain access.

## SETTING A BASIC ADAPTIVE RELEASE RULE

1. In a Content Area, click the item's Action Link (  ) to access the contextual menu.
2. Select **Adaptive Release**.
3. Select any of the four types of criteria by filling in the information for each one.
4. Click **Submit**.
